

ClearShelf

Premium AI-Driven
Demand Forecasting
&
Retail Catalog Platform

Submitted By: Aditya Sharma

What is ClearShelf & Our Goal

What is it?

Easy Product List: A page to view all products in the shop.

Smart Sales Guesser: Uses simple math and AI to guess future sales.

Helpful Explanations: Tells the user *why* the AI made that guess.

Our Goal

Stop Running Out of Stock: Warn shop managers before products sell out.

Easy File Uploads: Upload excel or CSV files of daily sales without errors.

Trace Everything: Keep a history of all uploaded files and clean up old data easily.

Why is this Tool Needed?

Bad Guesses: Shop owners often guess future sales by hand, which leads to buying too much or too little stock.

No Real-Time Context: Basic math tools only look at past sales. They do not know about weather changes or trends.

Hard to Trace Errors: When a wrong file is uploaded, it is hard to find it and delete it.

Confusing AI: Most AI tools just give a number and do not explain why they chose that number.

Main Problem: Shops need a simple way to upload sales data, get clear predictions, and see the reasoning behind them

Demand Forecasting

Our Solution

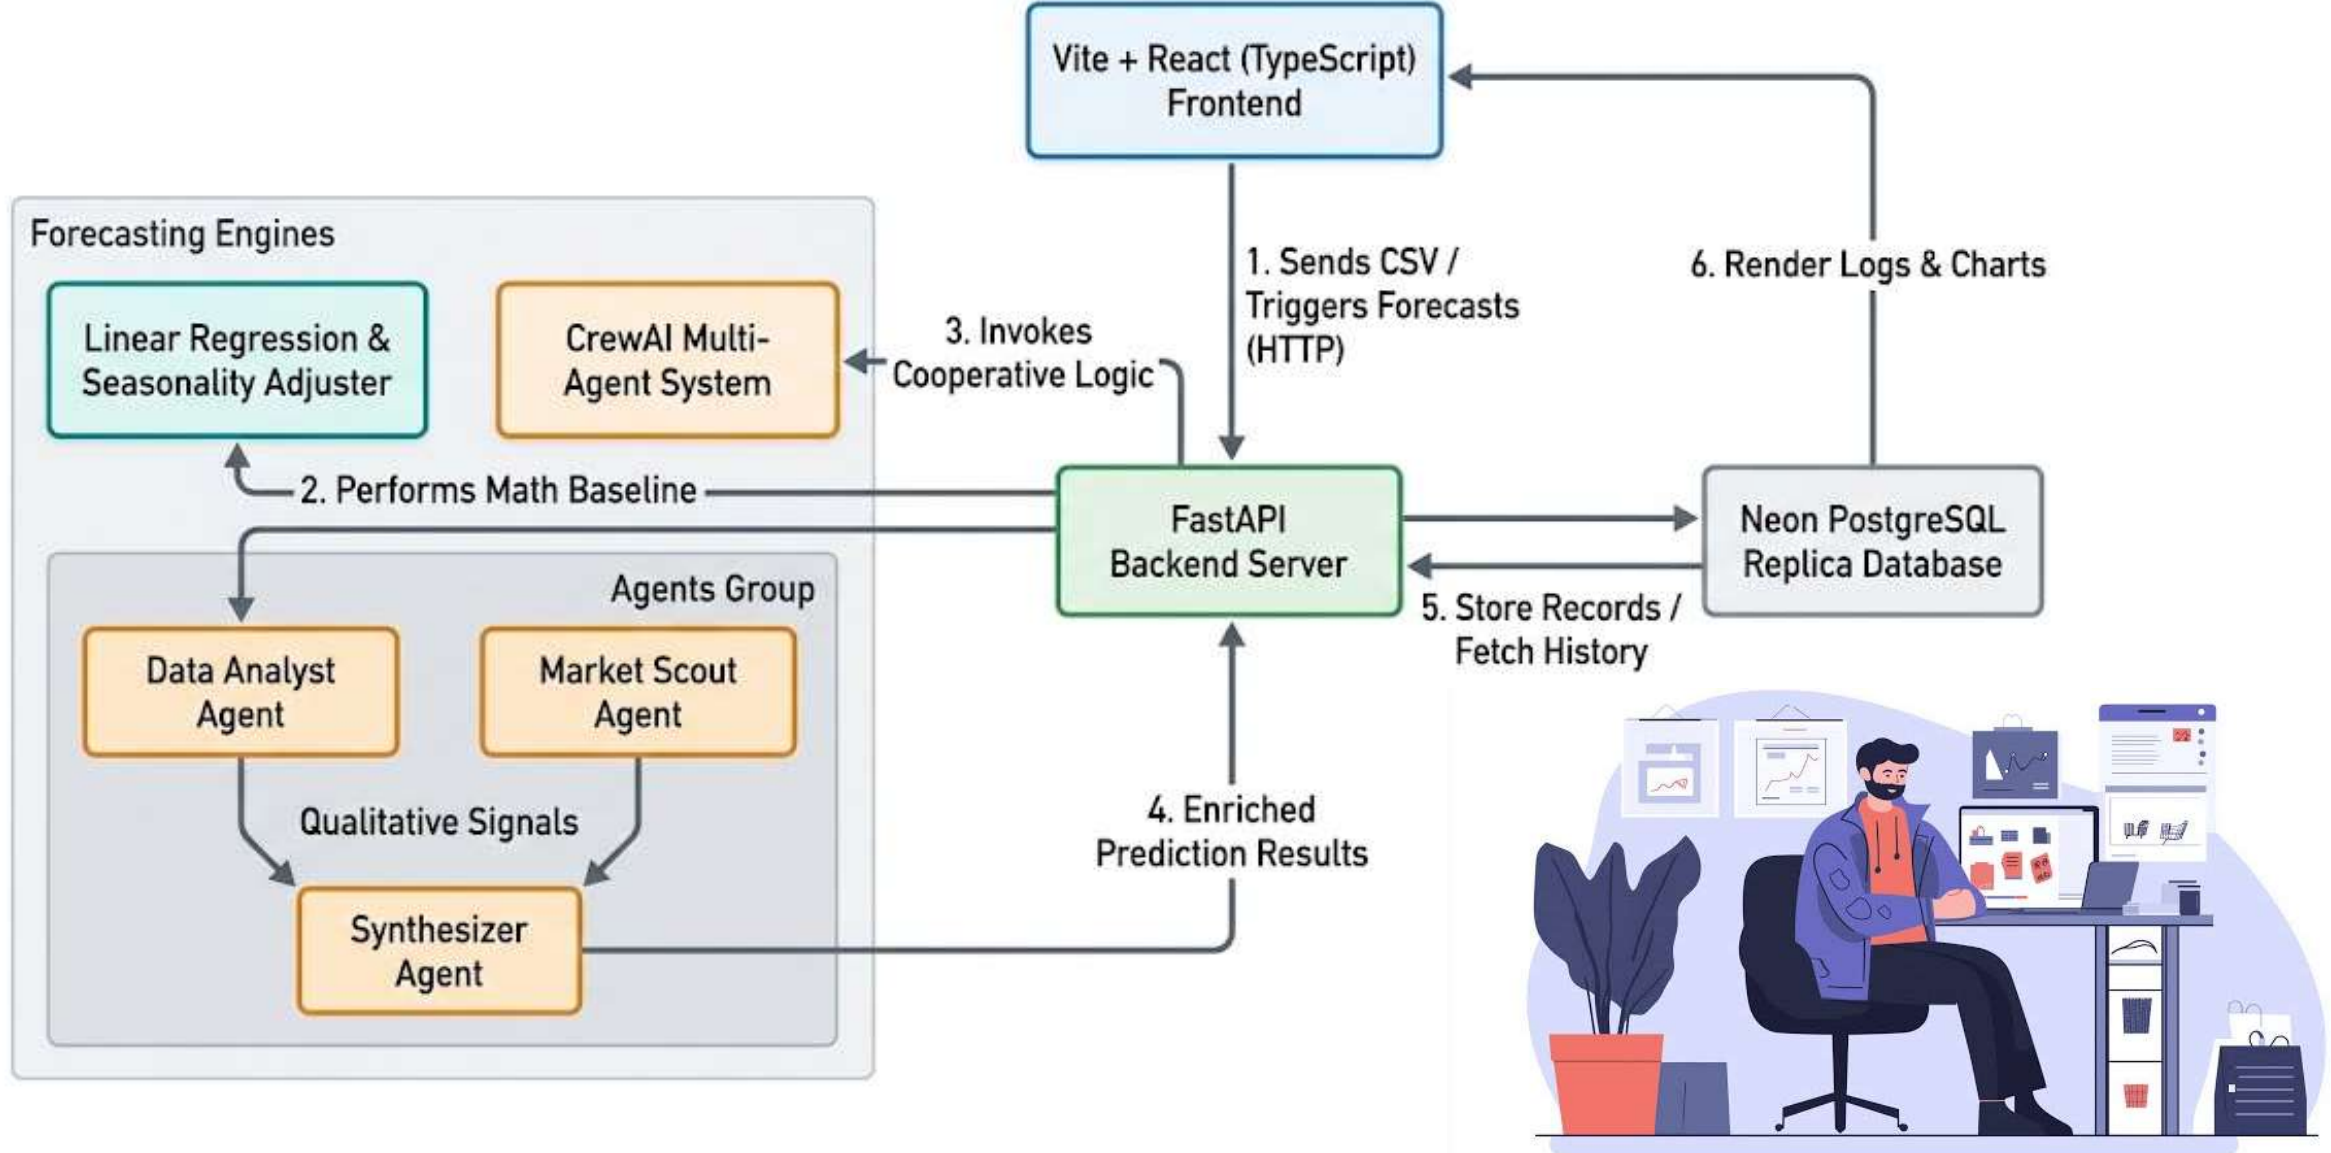

- **Past Sales Math:** The tool looks at the last 30 days of sales to draw a simple line showing if sales are going up or down.
- **AI Agent Checks:** AI bots check other facts (like day of the week or stock levels) to refine the math.
- **Final Answer & Reason:** The tool gives a final sales number and writes a short note explaining it.

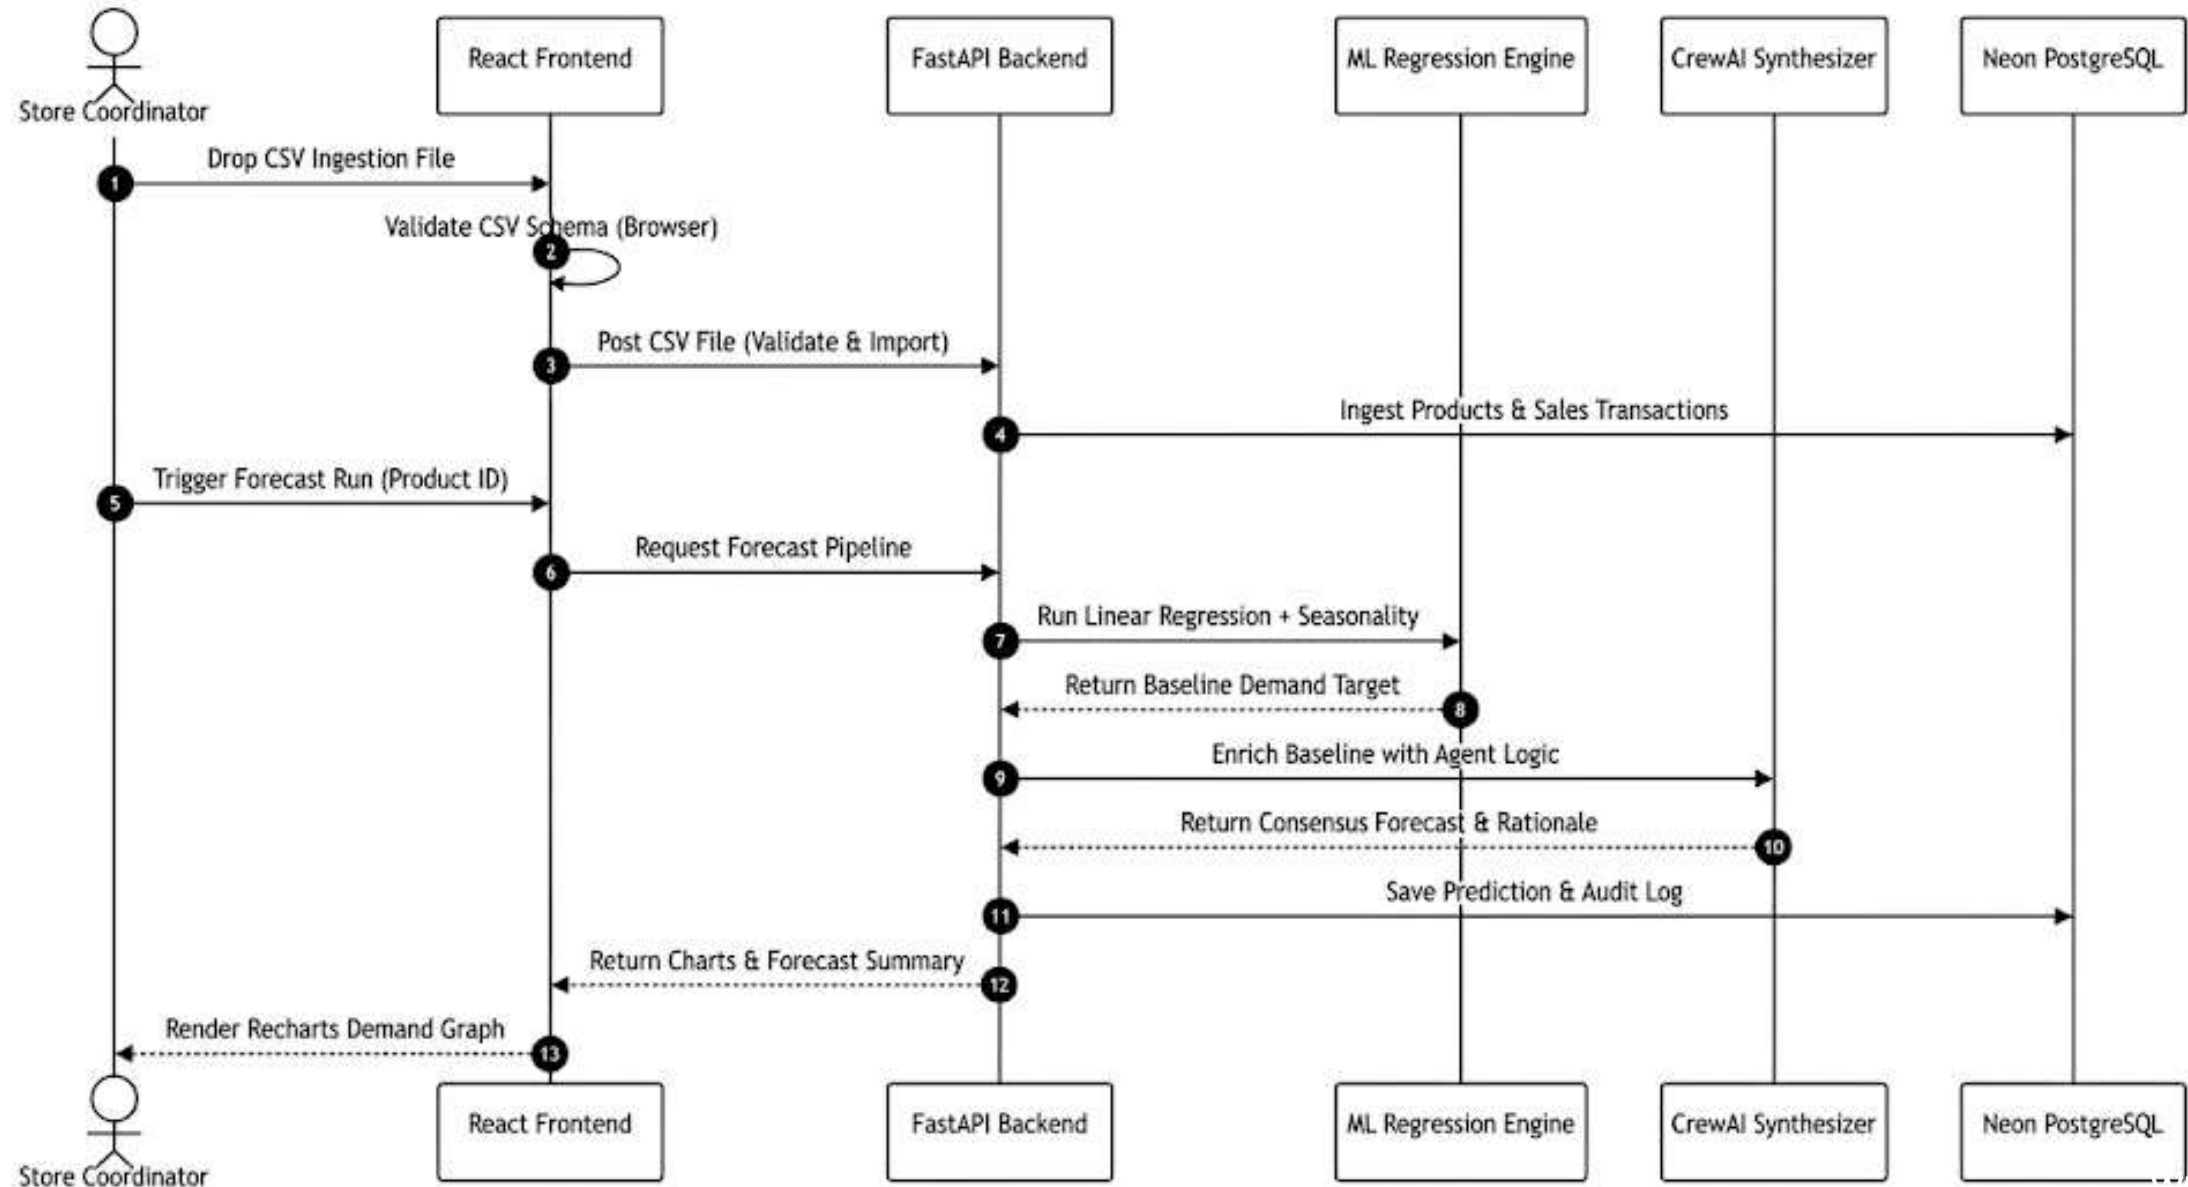

Simple Feature :

- Graphs showing past sales and future trends.
- Warns you with a red light when stock is low.
- Easy button to reset the database when testing.

How the Parts Connect Architecture

How It Works (Step-by-Step Flow)

Final Summary

Bridges the Gap: ClearShelf combines simple math calculations with human-like AI reasoning.

Better Adaptability: The AI agents adjust values based on real-world trends, making predictions more realistic.

Clear Explanations: Written rationales make the forecast numbers easy to trust and act upon.

*Thank
you!*
